Syntax

MARKDOWN SYNTAX

• Adding italics and bold:

```
*Italics*

**Bold**
```

• Adding headers (titles) of various sizes:

```
# header one
## header two
```

• Adding hyperlinks and images:

```
[Link](http://a.com)
```

• Adding block quotes:

```
> Blockquote
```

• Adding lists:

```
*
*
*
```

• Adding horizontal lines:

```
---
```

• Adding inline code:

```
`Inline code with backticks`
```

· Adding code blocks

```
code
```

JUPYTER NOTEBOOK SPECIAL COMMAND

• Displaying the code execution history:

```
%history -p
```

Concepts

- Jupyter Notebook, often referred to as Jupyter, is much more complex than a code editor. Jupyter Notebook allows us to:
 - Type and execute code
 - Add accompanying text to our code (including math equations)
 - Add visualizations
- Jupyter can run in a browser and is often used to create compelling data science projects that can be easily shared with other people.
- A notebook is a file created using Jupyter notebooks. Notebooks can easily be shared and distributed so people can view your work.
- Types of modes in Jupyter:
 - Jupyter is in edit mode whenever we type in a cell a small pencil icon appears to the right of the menu bar.
 - Jupyter is in command mode whenever we press **Esc** or whenever we click outside of the cell the pencil to the right of the menu bar disappears.
- State refers to what a computer remembers about a program.
- We can convert a code cell to a Markdown cell to add text to explain our code. Markdown syntax allows us to use keyboard symbols to format our text.
- Installing the Anaconda distribution will install both Python and Jupyter on your computer.

Keyboard Shortcuts

- Some of the most useful keyboard shortcuts we can use in command mode are:
 - Ctrl + Enter: run selected cell
 - Shift + Enter: run cell, select below
 - Alt + Enter: run cell, insert below
 - Up: select cell above
 - Down: select cell below
 - Enter: enter edit mode
 - A: insert cell above
 - B: insert cell below
 - D, D (press D twice): delete selected cell
 - z: undo cell deletion
 - s: save and checkpoint

1 11

- Y: convert to code cell
 Some of the most useful keyboard shortcuts we can use in edit mode are:
 M: convert to Markdown cell

 - Ctrl + Enter: run selected cell
 - Shift + Enter: run cell, select below
 - Alt + Enter: run cell, insert below
 - Up: move cursor up
 - Down: move cursor down
 - Esc: enter command mode
 - Ctrl + A: select all
 - Ctrl + z: undo
 - Ctrl + Y: redo
 - ctrl + s: save and checkpoint
 - Tab : indent or code completion
 - Shift + Tab: tooltip
